

FOOD FOR YOUR SOIL™

TOP-DRESSING • COMPOST TEA BASE • SOIL AMENDMENT

FULL OF NATURALLY-OCCURRING MICROBES

- HIGHLY DIVERSE POPULATIONS OF BENEFICIAL BACTERIA & FUNGI
- SUPPORTS A STRONG IMMUNE SYSTEM & IMPROVES SOIL STRUCTURE
- PROVIDES NUTRIENTS FOR BOTH PLANT AND SOIL

PURE, PREMIUM COMPOST

- FULLY COMPOSTED, SMELLS GREAT
- NO FILLERS OR FLUFF
- GENTLE ON PLANTS - WON'T BURN!

Bu's Blend™ is Demeter-Certified Biodynamic®

Only those products whose ingredients are grown & processed according to the highest agricultural & environmental standards bear the Demeter seal. For more information, visit www.demeter-usa.org.

YEAR-ROUND PLANT CARE WITH BU'S BLEND™

LAWNS & GRASSES	<p>ESTABLISHED LAWN: Broadcast 1/2" across lawn, then water in well. Repeat once every 3-4 months</p> <p>NEW SOD: Lay 1/2" of Bu's Blend™ over the rolled & prepared lawn area. Lay new sod directly over the compost.</p> <p>NEW SEED: Cover the seed with 1/2"-1" of Bu's Blend™. Water in well. Water normally through germination.</p>
CITRUS & AVOCADO	Spread 1" to 2" in a ring around the drip-line of the tree & water in. For smaller trees or trees in containers spread a 1/2" in the container or watering well & water in. Repeat throughout the normal feeding cycle, once every 3 months.
ROSES	Spread 1/2" around the watering well or base of plant, then water in. Be sure to keep compost off of the crown of the rose. Repeat every March, June and September.
BUSHES & SHRUBS	Spread 1/2" - 1" around the watering well or base of the plant, then water in. Repeat every 3-4 months.
EDIBLES	<p>NEW BEDS: In-ground, add about 30% of Bu's Blend™ to planting mix or native soil. Mix thoroughly, then water in. For best results let the bed rest for several days before planting. After planting, lightly dust the beds with Bu's Blend™, then water in. In containers, use Baby Bu's™ Biodynamic® Blend Potting Soil.</p> <p>ESTABLISHED BEDS: Cover planting area with 1/2"-1" of Bu's Blend each season. Dust when finished planting, then water in. After season, spread 1/2" of Bu's Blend™ over the bed or planter and let it rest. If planting new crops, water in. If letting the bed lay fallow (rest) for winter, spread the compost, but you do not have to water in.</p>
SUCCULENTS & DROUGHT-TOLERANT	Drop a handful into planting hole prior to planting or transplanting to encourage root development.
TREES	Spread 1/2" - 1" around drip-line, then water in. Repeat every 3-4 months.
